

BEAR CAVE

Total Pieces	16
Squares	12
Triangles	4
Difficulty Level	Easy

Special Note: after you build the cave, you can easily convert the top piece of the roof into a door. Simply detach the top piece and connect it to the base wall opening. Or, you can build a sunroof by keeping just one edge of the top square connected.

SIMPLY FOLLOW THESE STEPS

BASE WALL

1. Connect seven pieces of squares along the inside edges using the second slit.

ROOF FRAME

1. Connect five squares in the shape of a cross using second slits on one side only.
2. To test: place the roof frame on top of the base wall to make sure the pieces can be connected. (See *Putting It Together* illustration).
3. If the roof frame cannot connect to the base wall, flip the roof frame over and connect on the other side instead.

COMPLETING THE ROOF

1. Connect four triangles to the roof frame as shown through the second slits.
2. Flip the roof frame over after you're done. It should resemble a turtle shell.

Hint: You may want to rotate the roof as you finish each triangle to square connection.

PUTTING IT TOGETHER

1. Put the roof on top of the base wall, aligning the blocks.
2. Go inside and connect all the blocks using the second slits.
